Flow sensors and combined CO$_2$/flow

	Product #	Description	Packaging	Use with:
1	M2782A CE	Combined CO$_2$/flow sensor, infant/ neonatal, disposable ET: less than 4mm	10 sensors	Mainstream sensor (M2501A) with spirometry module (M1014A)
2	M2786A CE	Flow sensor, infant/ neonatal, disposable ET: less than 4mm	10 sensors	Spirometry module: M1014A

Transcutaneous gas monitoring

tcpO$_2$/tcpCO$_2$

Product #	Description	Packaging	Use with:
M1918A CE	Solid state tcpO$_2$/tcpCO$_2$ transducer	Includes: 1 transducer, 1 cap	Module: M1018A
M1918B CE	Solid state tcpO$_2$/tcpCO$_2$ transducer	Includes: 1 transducer, 1 cap, 1 calibration ring	Module: M1018A
989803151951 CE	tcpO$_2$/tcpCO$_2$ membrane kit	10 membranes, 10ml electrolyte, 2 sensor caps, 5 cleaning papers	Transducer: M1918B
989803151961 CE	tcpO$_2$/tcpCO$_2$ fixation kit	100 fixation rings, 4 bottles contact fluid @ 20ml	Transducer: M1918B
989803160371	Calibration ring	1 ring	Module: M1018A
15209-60010 CE	Accessory kit for tcpO$_2$/tcpCO$_2$ tranducer	10ml electrolyte, 12 membranes, 2 transducer caps, 25 cleaning papers, Instructions, O-ring remover	Transducer: M1918A
15209-60020 CE	Fixation kit for tcpO$_2$/tcpCO$_2$ transducers	100 fixation rings, 4 (20ml) bottles contact liquid, instructions	Transducer: M1918A

Transcutaneous gas monitoring

tcpO$_2$/tcpCO$_2$ (continued)

Product #	Description	Packaging	Use with:
15210–60010	Cal 1 gas cylinders for calibration (not available in Europe or Japan)	6 cylinders	Module: M1018A Calibration unit: 15210B Transducer: M1918A, M1918B Microstream extension server: M3015A, M3015B
15210–60020	Cal 1 gas cylinders for calibration (not available in Europe or Japan)	6 cylinders	
15210–64010	Gas Cal 1 gas cylinders for tcpO$_2$/tcpCO$_2$ calibration (meets international shipping requirements)	6 cylinders	
15210–64020	Gas Cal 2 gas cylinders for tcpO$_2$/tcpCO$_2$ calibration (meets international shipping requirements)	6 cylinders	
M2205A	Calibration tubes used to connect 15210B calibration unit to M1918A or M1918B transducer during calibration	5 tubes	Module: M1018A Calibration unit: 15210B Transducer: M1918A, M1918B

Jaundice management

BiliChek non-invasive bilirubin assessment tool

Using light instead of a needle, BiliChek allows you to test bilirubin levels without a blood sample. Only the individual calibration tip touches the baby. Used for testing at the baby's forehead or sternum, this innovative handheld unit gives instant results that allow you to make immediate treatment decisions. BiliChek can be used before, during and after phototherapy, making it ideal for the newborn nursery and the NICU. Clinically proven, the tool virtually eliminates the costs and time associated with blood draws and laboratory services.

BiliCal calibration tips / BilEclipse phototherapy patch

BiliCal calibration tips
The BiliCal individual calibration tip allows for calibration of the BiliChek device prior to each measurement. Individual calibration tips are disposable plastic, reducing the risk of infection or possible cross contamination.

BilEclipse phototherapy patch
The BilEclipse patch isolates a section of skin before, during and after phototherapy so transcutaneous bilirubin measurements can be taken with BiliChek.

WeeSpecs

WeeSpecs phototherapy mask
WeeSpecs' two-piece design is made from a soft, hypo-allergenic, light-blocking material that can be adjusted for a custom fit. The inside frame of the goggles seals around the skeletal socket reducing pressure and allowing the eyes to open and close naturally.

WeeSpecs Supreme phototherapy mask
WeeSpecs Supreme incorporates an anatomically contoured goggle design and dark fabric that provide superb light-blocking protection without placing pressure on the eyes and is designed to fit even the smallest babies. WeeSpecs are held in place with a layer of breathable, slip-resistant foam that helps reduce movement.

Infatherm Transport Mattress

The Infatherm warming gel mattress is designed to gently support an infant's entire body. In the NICU, nursery, delivery room, ER or OR, it is used to provide relief at pressure points and assist in maintaining a neutral thermal environment.

Infatherm Transport Mattress – disposable transport mattress with warming gel
When activated, the gel solution heats to 47°C/117°F, providing necessary thermoregulation. An infant can lie directly on its soft, non-slip fabric.

Squishon 2 and 3 / Squishon Mattress

Squishon 2 and 3
Provides an exceptionally soft, pliable surface to support and cradle a baby's head and/or body. The rectangular shape allows for head movement while maintaining a supportive surface. Made from a soft material and filled with a non–toxic gel.

Squishon Mattress
A gel–filled mattress provides a soft surface designed to help relieve pressure points, protect fragile skin and encourage proper positioning. Caregivers can reposition the baby and shift pressure points without having to handle the infant.

Squishon 2 and 3 – versatile gel-filled cushions
Squishon 2 to support the extremely low birth weight infant.
Squishon 3 for older preemies and babies with more resilient skin.

Gel–E Donut

Gel-E Donut

An exceptionally soft skin combined with a unique gel formulation make Gel–E Donuts soft, yet supportive. We designed it this way to help relieve pressure caused by prolonged immobility and other conditions where frequent handling may be contraindicated. Reengineered in 2015 to change to a non–porous skin.

WeePee diapers /
Pee-on absorbent underpad

WeePee diapers

WeePee diapers are specifically designed for premature infants to provide the right fit. The highly absorbent rectangular pad as well as the soft, flexible, non-adhesive closure system promotes developmentally appropriate positioning. Three sizes for a custom, comfortable fit in color-coded packaging to differentiate sizes at a glance.

Pee-on absorbent underpad

The Pee-on is a 10″ x 14″ non-allergenic, non-toxic, appropriately-sized disposable underpad that helps to protect linens from urine, blood and spills. It can be used as a mattress protector or with all SnuggleUp positioning aids.

Calming and soothing

Wee Thumbie / Wee Soothie

Wee Thumbie

The Wee Thumbie is one of the first pacifiers designed specifically for use by very low birth weight babies. It is modeled after the size and shape of the preemie thumb, facilitating the important sucking behaviors normally learned in utero. The notched area allows space for CPAP tubing, mechanical ventilation, or tube feeding. The Wee Thumbie is not manufactured with DEHP or natural rubber latex.

Wee Soothie

The Wee Soothie provides a superb fit for growing preemies or smaller term babies during their hospital stay. The notched area allows space for CPAP tubing, mechanical ventilation, or tube feeding. Our Wee Soothie pacifier is not manufactured with BPA, DEHP or natural rubber latex.

Super Soothie / WubbaNub

Super Soothie

Similar to Soothie, but more durable, the Super Soothie is not manufactured with BPA, DEHP or natural rubber latex. Its one-piece construction adheres to AAP guidelines.

WubbaNub

The WubbaNub uses the same Soothie pacifier that babies love and hospitals trust. This soft pacifier for newborns without teeth is specially designed to stay in place without clip or cord. A vibrantly colored, soft, plush animal gives the baby something to hold for better positioning. Available as a dog or duck, WubbaNub Soothies are not manufactured with BPA, DEHP, or natural rubber latex.

Education and consulting programs

NICU Core Development Program

Nurses who support the neuroprotective care and specialized needs of fragile newborns in the NICU require special training to work safely and effectively. The NICU Nurse Core Development Program provides nurses with the knowledge, skills, and competencies needed to deliver responsive care to neonatal patients and their families. This comprehensive program is customized to support an institution's educational objectives, clinical roles, job tasks, workflows, policies and procedures. It can be used to onboard new neonatal nurses, and it provides a learning environment for on-going professional development for staff.

Wee Care Neuroprotective NICU Program

Wee Care is a customized, internationally recognized education and quality improvement program designed to enhance your goals for family-centered neuroprotective Developmental Care practices in the NICU and beyond. It combines evidence-based best practices around seven core measures for infant development. Through change management and education, Wee Care helps to promote natural development, healthy growth, and smooth transitions out of the NICU to the home.

Preemie for a Day

This popular, interactive, multi-sensory training program contrasts the experience of an infant in a traditional NICU environment to that of an infant in a developmentally supportive NICU. The practice areas addressed are admissions, positioning and handling, feeding, and family and staff partnerships.

Neonatal Integrative Developmental Care Model

Cue-Based Feeding: Implications for Clinical Practice

This innovative program is aimed at individualizing the feeding experience for infants in the NICU through the practice of infant-driven feeding. The program is designed to address the physiologic, psychological, developmental and environmental issues that impact feeding experiences for the preterm and/or critically ill- hospitalized infant. You'll gain a deeper understanding of the crucial nature of the feeding experience and the implications of feeding interventions that impact a vulnerable infant. You'll come away with tools to promote and implement change in feeding practices within your own unit.

Wee Care Sacred Hour Maternity Program

Wee Care Sacred hour maternity program is an educational and transformational change consulting engagement that supports the hospital's efforts in neuroprotective family-centered Developmental Care in the perinatal areas (L&D/PPM/NB/NICU). The goal is to promote skin-to-skin contact (SSC) during the first hour after birth to increase early breastfeeding initiation and exclusive breastfeeding rates.

Wee Focus

The Wee Focus program draws from the success of the internationally recognized Global Wee Care® Program to "deep-dive" into a single core measure from the evidence-based Philips Neonatal Integrative Developmental Care model. Wee Focus is a process improvement program designed to help individual teams implement evidence-based best practices aimed at achieving a specific initiative. This 10-14 week clinical transformation performance improvement program is tailored to the unit's specific goals and improvement needs based on a single core measure. The Wee focus program is aimed at implementing neuroprotective family-centered Developmental Care practices in the NICU. The goal is to enhance the NICU experience for newborns and their families through education and change management.

Late Preterm Infant

The Late-Preterm Infant (LPI) program shares insights relating to the complexity of the late preterm infant and provide caregivers with a better understanding of the hidden challenges these infants face. Program topics include recognizing physiologic and behavioral differences between the preterm, late preterm, and full-term infant, identifying the LPI at risk for complications, and fostering developmentally supportive care throughout admission and the hospital stay.
